Summary

Salesforce Developer Analyst with 1+ year of experience in designing and implementing scalable CRM solutions within enterprise banking environments. Skilled in Apex, SOQL, and backend integrations, with a strong foundation in Python, FastAPI, and Oracle databases. Experienced in building optimized data workflows, debugging complex systems, and integrating AI/LLM-based solutions into business processes.

Education

SR University

Sep 2021 - Jun 2024

Bachelor of Technology in Electrical and Electronics (CGPA: 9.03)

Warangal, India

Professional Experience

Accenture

Aug 2024 - Present

Software Engineer (Salesforce Developer)

Hyderabad, India

- Worked with Apex, SOQL, and Salesforce data models to implement backend business logic.
- Designed and optimized SQL/PLSQL queries for high-performance backend processes.
- Debugged and resolved 20+ defects, improving system reliability and reducing production issues.
- Conducted regression testing and ensured zero critical post-production defects in recent releases.
- Collaborated with cross-functional teams to gather requirements and deliver scalable CRM solutions.

Bosch Global Software Technologies

Feb 2024 - June 2024

AI/ML Project Intern

Coimbatore, India

- Developed backend services using FastAPI.
- Built modular backend services using Python and FastAPI, improving system performance and regression turnaround time by 30%.
- Managed 100+ Git commits across multiple feature branches, following version control and code review best practices.
- Implemented structured logging, validation, and debugging processes.
- Worked on AI-based backend systems, laying groundwork for intelligent automation.

Technical Skills

Salesforce: Apex, SOQL, Workflow understanding.

Programming: Python, SQL, PL/SQL

AI: LLM, ANN, basic model training.

Framework & Tools: FastAPI, LangChain, HuggingFace, PyTorch.

Version Control: Git, GitHub.

Concepts: OOP, Data Structures and Algorithms, SDLC.

Projects

RAG-BASED KNOWLEDGE ASSISTANT

2024[[Github](#)]

- Designed a Retrieval-Augmented Generation (RAG) system using Python.
- Integrated LLMs to enable intelligent query-based knowledge retrieval.

Predictive Mechanism for Faults in EV Batteries using ANN

2023[[Dataset](#)]

- Built an ANN-based fault detection system for EV batteries.
- Analyzed 100,000+ data points to improve fault prediction accuracy by 30%.

Achievements

- Trained as a Salesforce Developer (Hands-on experience in Apex, SOQL, and CRM workflows)
- National Level EV Hackathon Winner (Bosch & IEEE)
- Oracle Apex Cloud Certified Developer Professional (Oracle University)
